

INACAN'S WHO'S MOST LIKELY TO

Who's most likely to is a simple yet fun drinking game, that requires almost nothing to play, except maybe a will to enjoy and get drunk with your friends. The game can be played with any number of players and questions can range from silly and light-hearted to more personal and revealing. It's important to establish rules and boundaries beforehand to ensure that the game remains fun and respectful for everyone involved.

PROPS REQUIRED

RULES

A group of people take turns asking a question that starts with "Who's most likely to..." and ending with a certain action or behavior. The group then votes on which member of the group is the most likely to do that action or behavior. The person who receives the most votes must then take a drink.

For example, a question could be "Who's most likely to forget their keys in the car?" The group would then vote on which member they think is the most forgetful, and that person would have to take a drink.

Who's most likely to end up in jail?

Who's most likely to fall asleep at a party?

Who's most likely to fall in love at first sight?
